

**APPENDIX A**  
**NOTES ON LIMITATIONS**

## **Geo Environmental Desk Study and Intrusive Ground Investigation, Assessment and Reporting Limitations**

### **General**

This report has been prepared by Geovia Ltd for the sole use of the client(s) as indicated within the text of this report. Should any additional party seek reliance of the contents of this report then approval from Geovia Ltd must be sought. Geovia Ltd cannot be held liable / responsible for the contents of this report if either it is used for purposes other than which it was commissioned or any additional parties using the report without the express permission of Geovia Ltd.

### **Phase I Desk Studies / Environmental Audits**

Information in this report is gathered from a number of sources including published documentation. Any information gathered from external sources has been accepted and reviewed in good faith and taken to provide true reflection of the site conditions. However, Geovia Ltd cannot be held responsible for any event where such data is inaccurate or does not reflect true site conditions. This would include future changes in site use or additional information that may become available. Should additional information come to light in the future that may change conclusions drawn for the site, Geovia Ltd reserves the right to review this information and if necessary change any existing opinion drawn accordingly.

The opinions within this report are partially formed at the time of the site walkover and therefore it is possible that any sub surface contamination issues are not visible at that time or the report cannot take into account any future contamination issues that may arise after the site walkover has been completed.

Other opinions developed within this study are formed from interpretation of historical data.

Information is not finite for any site and therefore it is possible that environmental liabilities associated with the site or the ground conditions below the site may not have been realised.

The instructed scope of works within the study may not include consultation with relevant Statutory Authorities or environmental regulators and therefore it is possible that geo-environmental issues affecting the site may have been overlooked.

### **Intrusive Ground Investigations and Geo-environmental Phase II Reports**

The investigation has been carried out to provide appropriate information on the ground conditions below the site. The nature of intrusive ground investigation results in only a small proportion of ground being investigated in relation to the overall size of the site. Therefore, it is possible that unforeseen ground conditions exist below the site, including contamination hotspots.

The scope of works for any ground investigation may be limited by financial and/or time constraints. Exploratory locations across any site can also be limited by services, utilities and physical obstructions. This may be particularly relevant for any given targeted ground investigation.

Guidance on the assessment of contaminated land within the UK is under continuous development. The assessments used within this report have been undertaken in general accordance with current assessment frameworks and industry best practise. However, Geovia cannot be held responsible for any future changes to contaminated land assessment that may alter the findings of this report.

Outline foundation recommendations have been developed from the ground investigation data. However, specific foundation design for any structure should be undertaken by a qualified structural/civil engineer. In the case of abnormal foundations advice and design should be sought from an appropriately qualified ground works contractor.

Groundwater conditions recorded are based on observations made at the time the site works were carried out. Groundwater levels will vary depending upon seasonal and weather related effects.

**APPENDIX B**  
**SITE PHOTOGRAPHS**

1. Southern site boundary facing northwards towards squash courts.

2. As 1 including swimming pool western external wall.

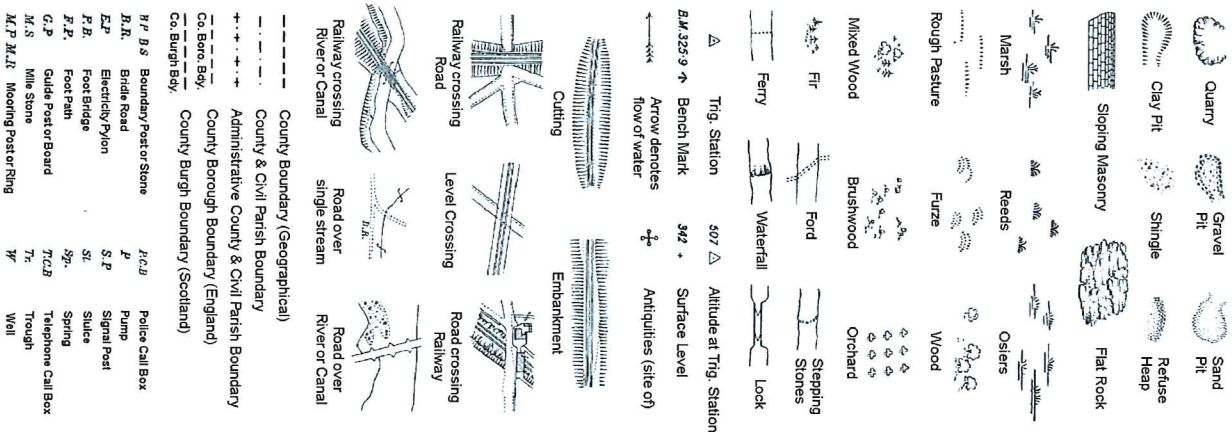

3. Raised grass area to south of swimming pool southern external wall. Eastern site boundary to photo background.

4. Southern site boundary, viewed towards south east.

**Fifeshire  
Published 1855**

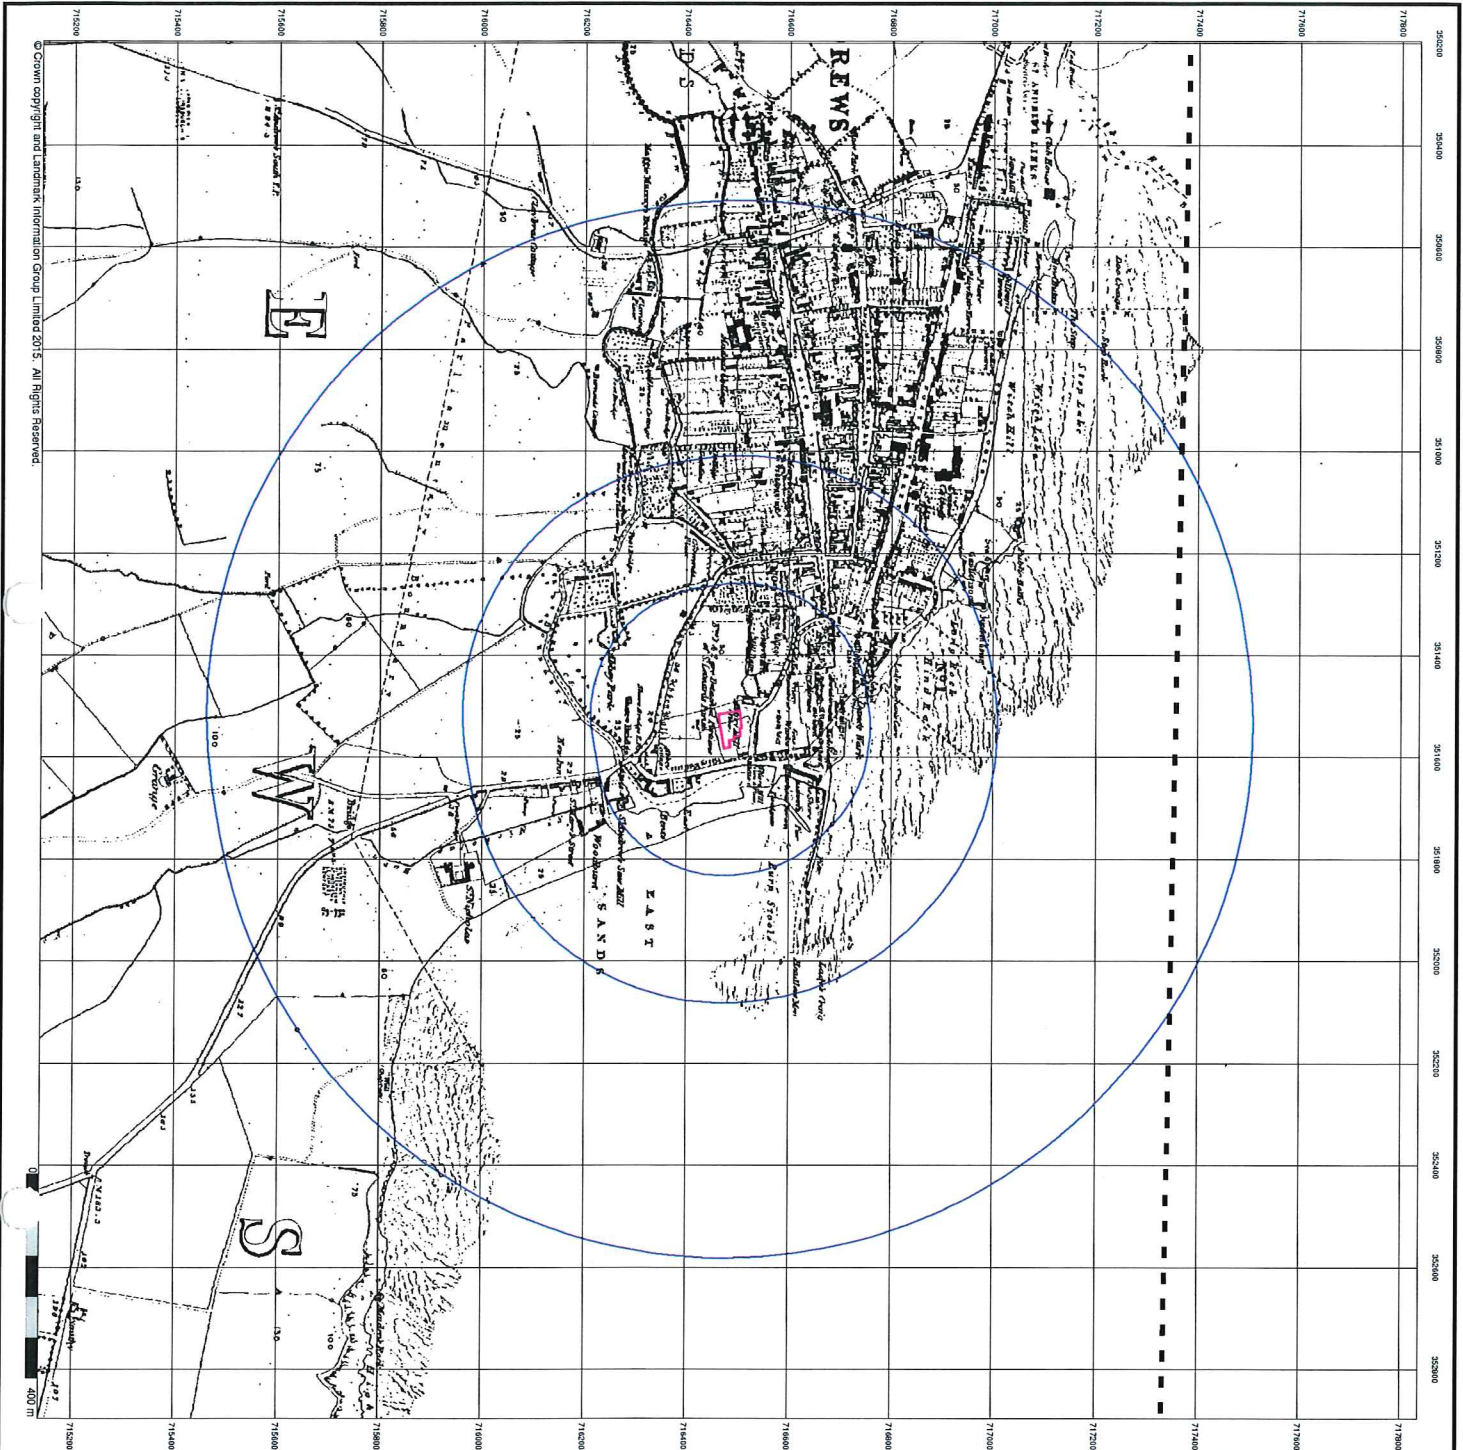

**Source map scale - 1:10,560**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with significant inaccuracies in outlying country or groups of country. Significant inaccuracies in outlying country or groups of country were corrected in a number of editions which updated the 1:10,560 mapping from an out-dated edition was produced, which updated unpublished - with all military camps and other strategic sites. These maps were initially overprinted with the National Grid in 1970. The first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

**Fifeshire**

**Published 1895**

**Source map scale - 1:500**

The 1:500 scale Ordnance Survey mapping was introduced in 1855, as a replacement for the 1:2500 scale and to complement the 1:2500 scale that had been implemented in 1833. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of houses. The uses of the areas are also indicated. Content of the plans does vary however, from the type of buildings shown, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

### Fifeshire

Published 1895

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held in the Ordnance Survey archives for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale maps were published covering local areas and by 1889 it covered the whole of Wales. The maps were based on the Cassini's Great Britain. The published date given below is often some years before the surveyed date. Before 1898, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## Large-Scale National Grid Data Published 1993

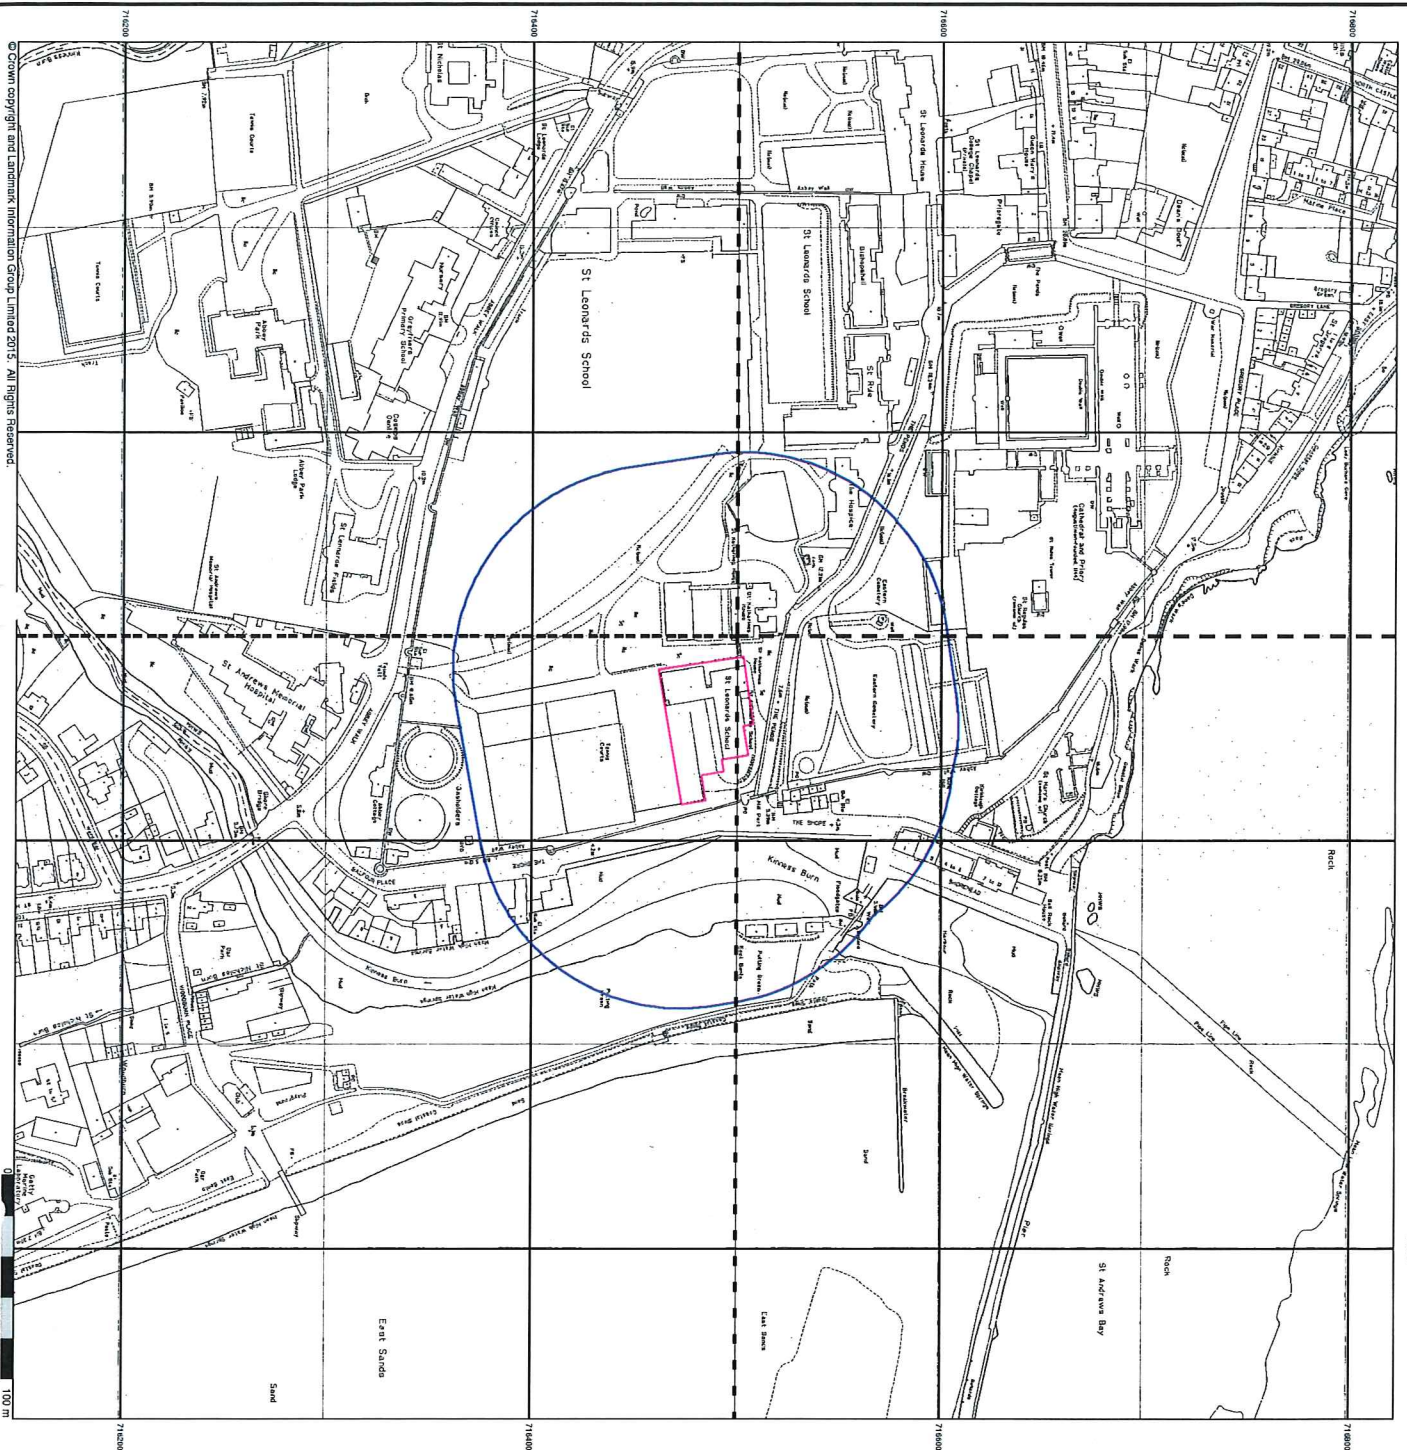

Source map scale - 1:1,250

\*Large Scale National Grid Data superseded SIM cards (Ordnance Survey's Survey of Information on Microfilm) in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

### Map Name(s) and Date(s)
