

Swales to be dug on some path edges
NOT within the SAM area.

These gentle edged ditches to keep water
from accessing the path and scouring the
surfaces

Ultitrec surface to be hand laid and rolled/compacted to
a depth of 60mm

Base layer – existing whindust path.

Some areas to be in-filled to create level base for
surfacing. Some areas to be built up to create berms
to deflect water into existing ditches.
