---

Morning Richard,

I write following our conversation earlier in the week regarding the SMC application for the drainage to the walkway to the East of the Pends.

As we discussed, the issue with raising the existing walkway is that this would reduce the already restricted headroom at the entrance to the Pends.

Please find attached a couple of photographs I took yesterday. The person in the photograph is 178cm.

It is for this reason our preference would be to continue with the walkway being laid on the grass but with improved drainage to prevent the walkway from sinking into the earth / grass when it becomes wet.

Should you have any queries or require further information please do not hesitate to contact me.

Regards
Kenny
