7th January, 2019

Dear Kenny Macpherson,

STABILISATION OF DELAMINATING STONE PANEL, DUNNOTTAR CASTLE

METHOD STATEMENT

Stone must be dry prior to works.

Open delaminations to be thoroughly flushed out with acetone (to remove dust/debris) prior to injection of Paraloid B72 acrylic resin (6% in acetone).

All delaminations to be then capped/filled with Paraloid B72 (10% in acetone) mixed with fine sand which would be textured and pigmented (with natural pigments) to match the surrounding stone.

Yours Sincerely,

Will Collier
(for Graciela Ainsworth Sculpture Conservation Ltd)
