Description of clearfell

- Machinery not allowed within the monument boundary. Trees which were historically planted within the cultivation terrace to be removed by harvester head from outside the boundary using a specialist head.
- The monument boundary will be marked with spray paint and/or canes with tape – whichever is most visible along the boundary to ensure a visible barrier.
- All operators on site to be briefed about the SAM during the pre-commencement and issued with a georeferenced hazards map.
- All stumps will be left on the site and all felled timber removed.
- Due to the safety concerns of the site, the aim is to work this face as far as possible in dry, summer conditions which will also help minimise ground disturbance.
